The XT series in a nutshell

Mastering the art of LED with spectacular visual performance, unrivaled reliability and great operating flexibility.

The new XT series further expands Barco's indoor high-resolution LED tiles portfolio. The 27" inch tiles with a pixel-pitch ranging from 0.9mm up to 2.5mm deliver superior seamless results, and the series includes all necessary features to maximize the reliability of your LED wall.

Barco's Infinipix™ ensures constant image quality and guarantees perfect color and grey scale levels for all ambient lighting conditions. What's more, the unique LED processing platform provides all necessary features to maximize the uptime of your installation, including integrated dual data redundancy.

Because these LED tiles are designed for wall mounting, they are fully accessible from the back and/or the front – creating a shallow depth. The improved robustness and the Assisted Module Extraction makes sure the tiles can be easily removed, for maintenance or replacement needs, with a reduced risk of pixel damage.

Fit for all applications

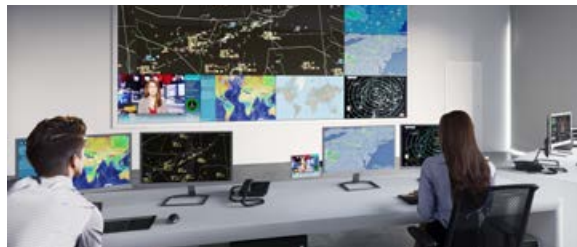

Pick the size that best suits your application. Barco's XT series is specifically designed to offer premium quality to a broad audience and provide a reliable solution for a wider range of indoor LED applications.

Experience centers

The XT series allows for truly creative displays and even spectacular curved setups. Wow visitors and impress shareholders at all times with consistent image quality in terms of color accuracy.

Control rooms

In 24/7 mission-critical applications, where reliability and flexible dimming capabilities are of utmost importance, Barco's seamless XT series is a safe and future-proof choice.

Themed entertainment

Our LED displays excel in reliability and serviceability, maximizing the satisfaction of not only your visitors, but also your operating crew. A worry-free process for everyone involved.

Television and movie studios

With the ultimate flexibility to recalibrate colors for specific camera requirements and guaranteed smooth video synchronization supporting your livestream, our XT series display walls create an experience your viewers will never forget.

Boardrooms

As the XT series operates in absolute silence and matches the full HD resolution of PowerPoint presentations, your executives can fully concentrate without being distracted. It's the ideal solution for larger boardrooms, even in full daylight.

Minimum Viewing Distance (MVD)

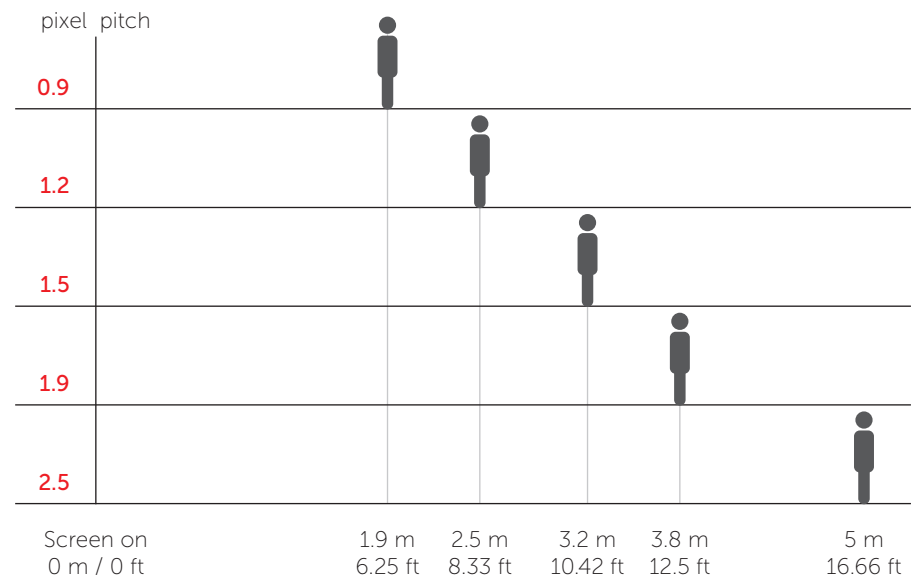

- Relates to a single pixel. The minimum viewing distance is the distance at which all LED dyes in a single pixel merge into a single colored panel.

Optimal Viewing Distance (OVD)

- Relates to LED characteristics and pitch placement. OVD is the distance at which the viewer can no longer distinguish individual pixels
- Rule of thumb is $OVD \text{ (in cm)} = 2 * \text{commercial pitch (in mm)}$

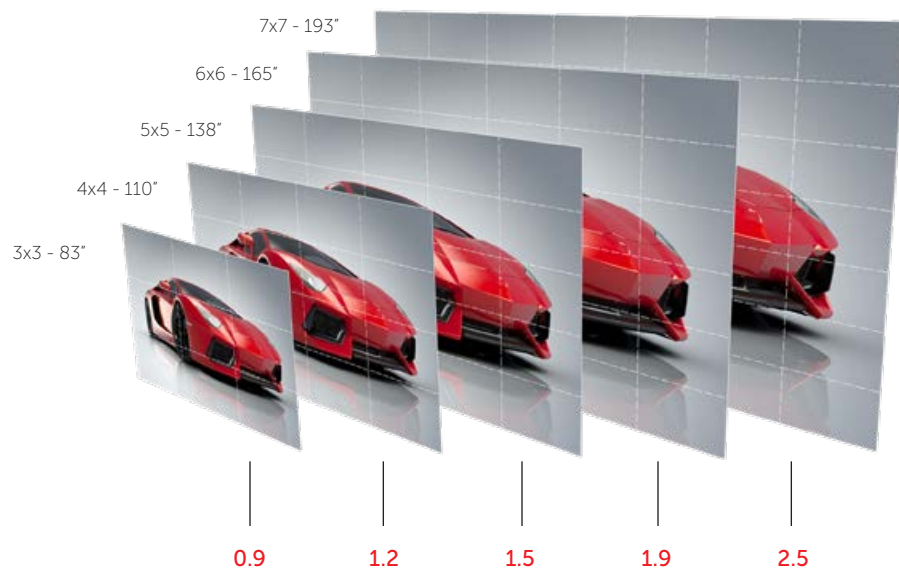

Maximum Reading Distance (MRD)

- Relates to the pixel pitch. MRD is defined as the maximum distance at which the minimum character size is still readable. Since a character is at least 7 pixels in height, MRD is the subjective distance at which the human eye can distinguish letters.

Building LED walls with XT series

With each tile having 16:9 aspect ratio, it is natural to create native Full HD or UHD screens. This allows displaying video in the most common formats in full, without distortion or unused canvas.

Full HD	# tiles horizontal	3	4	5	6	7
	# tiles vertical	3	4	5	6	7
Ultra HD (4K)	# tiles horizontal	6	8	10	12	14
	# tiles vertical	6	8	10	12	14

Tile diagonal 27.55" or 699.79mm

Tile weight With single PSU: 7.5 kg or 16.54 lbs
With dual PSU: 8 kg or 17.64 lbs

LED XT series 'mechanics first' install

1. Begin by installing the tile frame and cabling
2. Next, begin trim work and room finishing
3. Finally, install the LED modules*

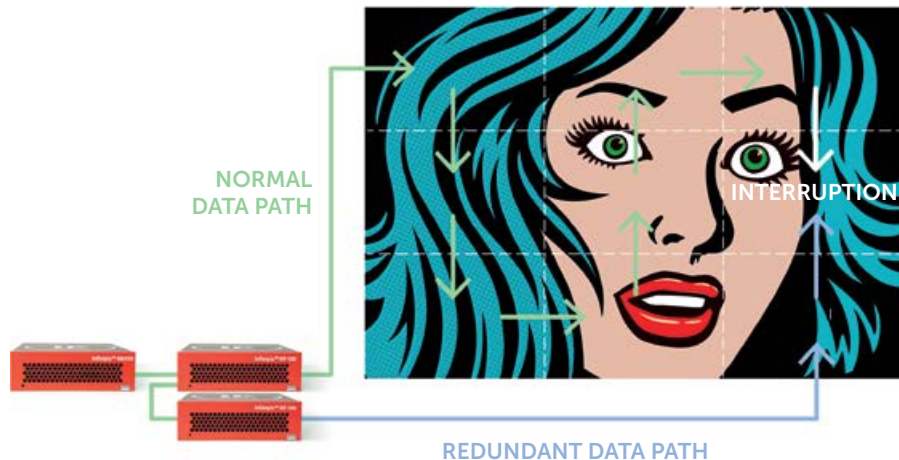

By using this model, you build the display from the top down and this reduces the possibility of pixel damage.

* LED frames and LED modules are shipped separately

Barco Infinipix™

Why Barco LED? Infinipix™ makes the difference!

- Color accuracy
- Low latency
- Auto calibration
- Video synchronization
- Low brightness greyscales
- Secured data flow

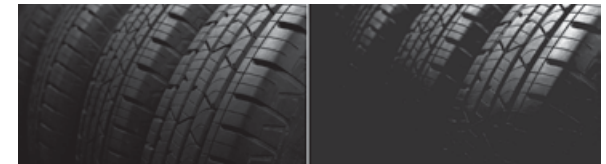

Barco's LED processing provides a redundant data path that travels in the direction opposite to the data flow. When this back-up data flow takes over, an uninterrupted image is guaranteed while you fix the failure.

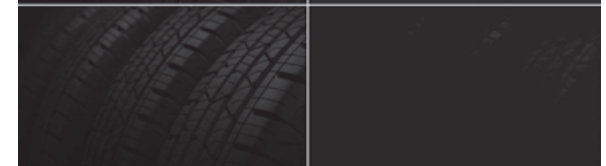

Barco Infinipix™

Competition

100 % brightness

10 % brightness

100 % brightness

10 % brightness

The optimized dimming technology of Barco Infinipix™ makes sure the LED display shows the same level of color, grayscale and detail when operating in dimmed mode as it does at full brightness.

Warranty and EssentialCare

A unique service package tailored to your LED needs!

Up to 7 years complete peace of-mind with guaranteed display uniformity and fast resolution

1. Run your LED display with full confidence and complete peace-of-mind with up to 7 years of dedicated service and support for your system. With over 50 years of visualization experience in mission-critical environments across various industries, you can rely on Barco as a solid and reliable service partner.
2. Enjoy guaranteed color consistency across your LED display during the entire contract period. Servicing is exclusively done with fully batch compatible replacement modules that meet the specs of your original tiles. A uniform image, now and well into the future.
3. Have spare LED tiles at your disposal to cover potential handling damages during the installation. The EssentialCare contract also gives you access to onsite spare parts for immediate remediation.
4. Benefit from priority support with helpdesk responses to your tickets within four business hours, and spare parts assured to leave the next business day per express shipment.

Barco certified installation partner program

Barco is making it easy to buy LED by providing our partners and their clients with this turnkey solution.

One package, one price

Get simple and predictable installation pricing for both package and custom LED systems.

Guided or full installation

Choose from one of Barco's trained and certified installation partners to help install your project.

One key contact for you

One point of contact assigned to your project, so you have answers when you need them and direct access to your project team.

Efficient and scalable

Our one price package makes buying LED panels predictable and efficient, and with our partners' national footprint we make installation easy for you.

Our partners

Mounting solution partners

Premier Mounts, Vogel's and Chief/Legrand all have Barco XT mounting solutions and some offer ADA-compliant mounting hardware packages.

Installation partners

Nationwide coverage. Wherever you are, we've got your back.
